Activity 1: Student Grade Calculator (Using Functions)

Problem Statement:

Create a **Student Grade Calculator** that allows users to:

1. **Enter student scores for three subjects** (Math, Science, and English).
2. **Calculate the average score** using a function.
3. **Determine the letter grade** based on the average.
4. **Display the results** in a structured format.

Each step should be handled using **separate functions** for better modularity.

Note:

- *Give me your best output*
- *Add what you think is needed*
